

# Release Notes for 7.0.2063

Feature	Type	Comments	Settings	Required Changes
Activity Log	Fix	Pickup and detail screens were getting a runtime error if a prompt was left up for a certain time while entering the screen (e.g. the prompt for customer information verification or the prompt for route/counter selection).		
AR	Fix	CCOF/ACH payments applied in the Statement Wizard will now include statement discounts in the payment amount calculation.		
Assisted Assembly	New Feature	<p><b><i>As a SPOT user I would like to use boxes at assisted assembly for restoration jobs</i></b></p> <p>The Assisted Assembly function now supports a "Restoration Mode". This activates features to expedite the assembly of restoration orders, specifically enabling the drawing of items from multiple source orders (voiding those as they empty).</p> <p>When a "Restoration Mode" option is enabled in the Assisted Assembly profile, the user may now remove an item from a new order during assembly by scanning that item twice in a row.</p>	Added to the Assisted Assembly Profile a new setting called "Restoration Mode". Options are "Disabled" (default, function operates as before), "Orders by Room" (new orders are created by Room only), "Orders by Room/Dept Group" (new orders are created by Room & Dept Group), "Orders by Room/Room Location" (new orders are created by Room and location within the room, or description), and finally "Orders by Room/Location/Dept Group", which causes new orders to be created by all of the above. An order equates to a box.	
Email	Change	Tender descriptions in email receipts are now more descriptive.		
Email	Change	The default email receipt template now uses the more versatile word "transaction" instead of "payment."		
Email	Fix	Menu->Email->Order Status Notifications was not honoring Store Settings->Search/Lookup Settings->All Stores Lookup Selection. SPOT now restricts order notifications to this list if it is set (note: Enable All Stores Lookup Selection must also be checked).		
Email	Addition to Existing	<b><i>As a SPOT user, I would like additional options on printing and emailing receipts</i></b>		

	Feature	The prompt for e-mail/printed receipt now includes an option for no receipt at all; it also allows clerks to ask the customer for an e-mail address if one is not on file.		
General	Fix	Clerks were sometimes getting an "Invoice error 6" when detailing a Priced Quick order.		
General	Change	The "Invalid Order" message that appears in Order Pickup when an invalid order has been scanned now will not be dismissed with the Enter key (i.e., another invoice scan).		
General	Fix	When Hierarchical group security is enabled, some users could not access Tools->Users,Groups,Rights - SPOT would go into an infinite loop requiring it to be closed.		
HSL	Fix	HSL scan at markin was not adding the item to the invoice if store settings were not first resaved (occurred only in early versions of 7.0.2002)		
Localities	Fix	Associating HSLs to an invoice with a large number of combined like items was resulting in an invoice save error 27.		
Marketing	Change	Updated description for "Disable Marketing Incentives" on the route settings. This setting disables marketing incentives for orders through the route posting screen but not through the pickup screen.		
Marketing	Fix	SPOT now honors the signup cutoff threshold for a Bounceback Marketing Incentive.		
Marketing	Addition to Existing Feature	<b><i>As a SPOT user I would like to expire least-used department bounceback incentives</i></b> Added Expiration Cutoff (in days) to "Least-Used Department Group" Marketing Incentive	Company->Marketing Incentives->Marketing Incentive Profiles->Type 1 Incentive.	
Markin	Fix	SPOT will now display upcharge amounts defined with more than two decimal places.		
Markin	Fix	<b><i>As a SPOT user, I would like item view count increases to decrement/increment priced quick items</i></b> Quantity changes made in Item View or the use of the Clear Item button while detailing Priced Quicks will now reconcile the Priced Quick items properly, adjusting quantities and restoring the Priced Quick		

		items to the invoice if necessary.		
Pickup	Fix	If "Store Settings > Cashier Settings > Non-Cash Payment Adjustment" was pointing to a pre-tax taxable adjustment, the tax was not included in the extra amount paid.		
Pickup	Fix	There was sometimes a penny rounding error on payments when using taxable non-cash payment surcharge adjustments.		
Pickup	Fix	Cash tender was defaulting to the amount due instead of requiring the clerk to enter the amount of cash taken.		
Pickup	Change	<b><i>As a SPOT user, I would like to be prompted to pickup orders after I have prepaid the priced quick orders</i></b> The prepay screen will now prompt to pickup ready orders after the prepay operation has finished if forced prepay of Priced Quick orders is turned on.		
Printing	Addition to Existing Feature	Added new default Eltron invoice template that uses Windows based fonts to improve printing speed.		
Quick	Fix	Keyboard markin screen was mistakenly reporting a piece count mismatch when detailing some Priced Quick orders.		
Quick	Fix	Type 5 coupons were not working with the Priced Quick screen.		
Reports	Fix	Email presentations sent from a report on a Quick Report tab were getting an error attempting to insert a CRM record.		
Reports	Fix	Restoration reports were no longer using archived data even if the selected dates required it.		
Reports	Fix	"Credit Card Transactions" report now will include archive data if requested.		
Reports	Change	Reports Gallery now shows a link to the Reports Browser web site.		
Reports	Addition to Existing Feature	<b><i>As a SPOT user I would like direct access to the SPOT Reports Browser from reports gallery</i></b> Added Link to SPOT Reports Browser to Reports Gallery.		
Reports	Fix	Reports Gallery>Route>Route Discounts & Route		

		Customer Sales - Fixed an issue where if multiple stores are selected the report would not return any results.		
Reports	Fix	Reports Gallery>Route>Route Conversions - Reduced time taken to generate report and fixed an issue where customers may be excluded from the report in certain situations.		
Search	Fix	Customer records with an empty, non-null ClientVT value in the database will now be properly retrieved.		
Search	Change	Customer search screen now shows "Send EMail/SMS" instead of "Send Email" and performs an initial check to see whether or not there is a valid email/sms target to which to send.		
Search	Addition to Existing Feature	Created new alerts and searches to show how many and which priced quicks have not yet been detailed.
