Release Notes for Version 7.0.8879

App	Feature	Type	Comments	Settings/Required Changes
SPOT	Cash Control	Addition to Existing Feature	**As a SPOT user, I would like to give my managers special permission to use a clerk's drawer anytime.** When Cash Drawer Association is set to "Workstation & Single User", a user with the new "Use Any Cash Drawer" activity right will be able to use order pickup, prepay and make payments from Order View using the drawer session checked in on the workstation, even if it was checked in by another user. If the user attempts to check out the drawer session they will be reminded that it belongs to another user and given the option to proceed. The intent is to give managers the ability to ignore the single user requirement when the user that checked the drawer in is not immediately available. This right has no effect if Cash Drawer Association is not set to "Workstation & Single User".	Store > Cashier Settings > Cash Drawer Association: Workstation & Single User
SPOT	Configuration	Fix	Fixed a problem that could cause a loss of Department Settings.	
SPOT	Configuration	Fix	Fixed a problem where updating user activity settings made it impossible to detail until SPOT is restarted.	
SPOT	Configuration	Addition to Existing Feature	**As a SPOT user, I would like Lat/Long to be updated properly when adding a new store address** If Telogis is enabled for the current workstation, saving a new SPOTMap address in Setup->Location Information will automatically geocode it and fill in Latitude and Longitude.	
SPOT	Conveyor	Fix	**As a SPOT Conveyor User I would like a useful default time range in Conveyor > Operations > Activity** The default time range in Conveyor > Operations > Activity will now be from 12:00:00 am on the current date to 11:59:59 pm. Thus the whole day is selected by default instead of a 0 second range that will never return useful data. The range can be changed by clicking the button as before.	
SPOT	Credit Cards	Fix	**As a SPOT user, I would like my UK terminals or SPOT Payment Screens to accept or prompt for CVV codes** Added "Customer Present/Not Present" control back onto the tender view for UK customers. Updated A/R payment view to respect this, as well.	
SPOT	Customer View	Addition to Existing Feature	**As a SPOT user, I would like a button to quickly email a statement in AR-CC tab of Customer View** "Print Statement" button on AR-CC tab of Customer View is now "Print/Email Statement". If the customer has an email address, and the statement destination is set to one of the email options, clicking "Print/Email Statement" will ask the user if they want to print or email the statement. If the customer does not have an email address or the statement destination is set to "Print", the report viewer will display the statement as before without prompting.	

SPOT	Email	Addition to Existing Feature	**As a SPOT user, I would like @TOTALDUE token to be available for order ready emails** Added @TOTALDUE to scheduled-task based order ready emails	
SPOT	Email	Fix	Fixed Store > Email Settings > On Behalf Of Name not working when Company > Email Settings > Email Service Provider was set to Service Host	Store > Email Settings > On Behalf Of Name
SPOT	Email	Fix	When running AR CCOF payments and using email AR receipts, the warning about a missing unsubscribe URL will now be displayed only once per CCOF payment session.	
SPOT	Email	Fix	Added new "Always Email (No Fallback)" option to Workstation > Mark-in Settings > Print or Email Visit Info. When set to "Always Email (No Fallback)" then a visit will not print even if the customer has no valid email address.	
SPOT	Inventory	Fix	Fixed a problem where enabling auto-rack at Assisted Assembly confuses Scan Inventory into giving wrong results.	
SPOT	Markin	Fix	If Prompt for Piece Count at Detail is enabled, held orders will now remember the piece count given by the user rather than asking again when the order is resumed.	
SPOT	Markin	Fix	The vertical bar character (|) will no longer be accepted in the description of a describe and price item to prevent various problems with reports and exports.	
SPOT	Pricing	Fix	Splitting a prepaid invoice that has a non-Standard invoice mode causes the pricing logic to credit the split invoice in error	
SPOT	Printing	Fix	Did a sweep through SPOT of all locations where printing from a grid occurs and changed the printing support to be more compatible with the current hosting environment.	
SPOT	Printing	Fix	Fix problem with printing graphs to the report printer from the Welcome screen	
SPOT	Quick	Fix	Fixed the Quick Promise Date Priority option when the original department is hidden for detail	
SPOT	Reports	Fix	**As a SPOT user, I would like the Route Trend report to include only Route orders and specify the Customer Pickup Type** Excluded counter orders from calculation of customer stats on Route Trend Report	
SPOT	Reports	Fix	Fixed the "Year" option of the Period Sales report to use the entire selected year instead of just the first day.	
SPOT	Rewards	Fix	SPOT now validates customer rewards program requirements on customer save to prevent assigning a customer to a plan without required information (address, phone, etc.)	
SPOT	Rewards	Fix	Fixed a problem where reward coupons are not generated after switching reward plans.	
SPOT	Rewards	Fix	Closed a loophole allowing customer without an email address to be saved with a customer rewards plan that requires an email address.	
SPOT	Routes	Fix	Changed the color scheme of the date-time picker controls in the On Demand Route Scheduler to make the days of the week more readable. This also required	

			changing the background color of the header as both are drawn in the same color.	
SPOT	Search	Fix	Temporary barcodes assigned to locker customers were occasionally retrieving the wrong customer when beginning a markin session	
SPOT	Setup	Fix	**As a SPOT developer, I would like to have the system enforce a "no leading/trailing whitespace" policy on all collection members (name of the collection entry).** When editing the name of a collection item in Program Configuration SPOT will now remove any leading or trailing spaces from the name the user provides. This will prevent various known problems that crop up when a collection item has leading or trailing spaces.	
SOS	General	Change	Significantly optimized performance of SPOT Offline Services for large data sets.	
SPOT	Exports and Utilities	Addition to Existing Feature	**As a user of SPOT's Data Export Service A, I would like a "BagScan" column added to the invoice section** A "BagScan" column has been added to the invoice section of Data Export Service A	
SPOT	Home Page	Change	**As SPOT we would like the updated logo as the default for the SPOT home page** Updated SPOT logo and splash screen.	
SPOT	Messaging	Fix	Fix error when filtering a SPOT Message's recipients by store when one of the stores has an apostrophe in the name.	
SPOT	Messaging	Fix	Attempting to send a SPOT Message with a recipient list that is too large will now warn the user and not send, rather than causing a database error.	
SPOT	Reports	Change	**As a SPOT user, I would like the Brand Usage report also work for modifier lists named "Brand"** The brand usage report can now cope with modifier lists named either Brands or Brand	
SPOT	Tags	Fix	Fixed a date-dependent bug with the @DROPOFF tag template token.
